|                                                                                                                                                                                                                                                           |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| AUTHOR INDEX, Volume 143, Number 1, February 27, 1987                                                                                                                                                                                                     | iii |
| Effect of Platelet-Activating Factor on $\beta$ -Adrenoceptors in Human Lung<br><i>Devendra K. Agrawal and Robert G. Townley</i>                                                                                                                          | 1   |
| Chinchilla "Big" and "Little" Gastrins<br><i>Yasuhisa Shinomura, John Eng, and Rosalyn S. Yalow</i>                                                                                                                                                       | 7   |
| The Rabbit Differs from Other Mammals in the Tissue Distribution of Alkaline Phosphatase Isoenzymes<br><i>Tomoo Noguchi and Yoshihisa Yamashita</i>                                                                                                       | 15  |
| Hydrogen Peroxide Elicits Activation of Bovine Pulmonary Arterial Soluble Guanylate Cyclase by a Mechanism Associated with Its Metabolism by Catalase<br><i>Michael S. Wolin and Theresa M. Burke</i>                                                     | 20  |
| Inhibition of Proliferation of Cultured Rat Liver Epithelial Cells at Specific Cell Cycle Stages by Transforming Growth Factor- $\beta$<br><i>Perry Lin, Chi Liu, Ming-Sound Tsao, and Joe W. Grisham</i>                                                 | 26  |
| Sarcolemmal Phospholipid N-Methylation in Genetically Determined Hamster Cardiomyopathy<br><i>K. Okumura, V. Panagia, G. Jasmin, and N. S. Dhalla</i>                                                                                                     | 31  |
| $\gamma$ Interferon Inhibits Basal and Interleukin 1-Induced Prostaglandin Production and Bone Resorption in Neonatal Mouse Calvaria<br><i>O. Hoffmann, K. Klaushofer, H. Gleispach, H. J. Leis, T. Luger, K. Koller, and M. Peterlik</i>                 | 38  |
| Modified Peptides Which Display Potent and Specific Inhibition of Human Renin<br><i>Jay R. Luly, Jacob J. Plattner, Herman Stein, Nwe Yi, Jeffrey Soderquist, Patrick A. Marcotte, Hollis D. Kleinert, and Thomas J. Perun</i>                            | 44  |
| Drug Metabolism by the Human Hepatoma Cell, Hep G2<br><i>Shigeru Sassa, Osamu Sugita, Richard A. Galbraith, and Attallah Kappas</i>                                                                                                                       | 52  |
| New Substrates for Enkephalinase (Neutral Endopeptidase) Based on Fluorescence Energy Transfer<br><i>Bernard Malfroy and John Burnier</i>                                                                                                                 | 58  |
| The Rates of Fast Reactions of Carbon Dioxide and Bicarbonate in Human Erythrocytes Measured by Carbon-13 NMR<br><i>David W. Hoffman and Robert W. Henkens</i>                                                                                            | 67  |
| Volume Expansion-Induced Changes in Renal Tubular Membrane Protein Phosphorylation<br><i>Tai C. Chen, Jeannette Humpierres, Dean Hanna, Susan B. Perregaux, and Jules B. Puschett</i>                                                                     | 74  |
| Insulin Stimulation of Iodothyronine 5'-Deiodinase in Rat Brown Adipocytes<br><i>Ira Mills, Renee M. Barge, J. Enrique Silva, and P. Reed Larsen</i>                                                                                                      | 81  |
| Biological Activities of Catfish Glucagon and Glucagonlike Peptide<br><i>Naseema M. Hoosein, Alan M. Mahrenholz, P. C. Andrews, and Ruth S. Gurd</i>                                                                                                      | 87  |
| Rapid Mechanical Changes in the Amphibian Retina Evoked by Brief Light Pulses<br><i>I. Tasaki and P. M. Byrne</i>                                                                                                                                         | 93  |
| Identification of a Characteristic Cytosolic Polypeptide of Rat Preneoplastic Hepatocyte Nodules as Placental Glutathione S-Transferase<br><i>T. H. Rushmore, R. N. S. Sharma, M. W. Roomi, L. Harris, K. Satoh, K. Sato, R. K. Murray, and E. Farber</i> | 98  |
| Proofreading of a Mutagenic Nucleotide, $N^4$ -Aminodeoxycytidylic Acid, by <i>Escherichia coli</i> DNA Polymerase I<br><i>Mitsuko Takahashi, Kazuo Negishi, and Hikoya Hayatsu</i>                                                                       | 104 |
| A Specific $\alpha$ -Fetoprotein Gene Binding Protein in $\alpha$ -Fetoprotein Producing Rat Hepatomas<br><i>Zhi Wang, Gilbert J. Cote, and Jen-Fu Chiu</i>                                                                                               | 110 |
| C-13 NMR Spectral Studies of the Thyroid Hormone Transport Protein, Transthyretin, and the Pancreatic Insulin Storage Moiety, the Zinc-Insulin Hexamer<br><i>D. J. Craik, J. G. Hall, and K. A. Higgins</i>                                               | 116 |
| A 500 MHz $^1\text{H}$ NMR Spectroscopic Study of Met <sup>5</sup> -Enkephalinamide in Aqueous Solution: Ethanol-Induced Conformational Changes<br><i>V. Renugopalakrishnan, S.-G. Huang, and R. S. Rapaka</i>                                            | 126 |
| Monoclonal Antibodies to Angiotensin II<br><i>Thomas M. Reilly, Andrew T. Chiu, and Pieter B. M. W. M. Timmermans</i>                                                                                                                                     | 133 |
| The Effect of Cyclophosphamide on Arginine Vasopressin and the Atrial Natriuretic Factor<br><i>P. Larose, H. Ong, and P. du Souich</i>                                                                                                                    | 140 |

|                                                                                                                                                                                                |                                                                                                                                                                      |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Suppression of Matrix Protein Synthesis by Herpes Simplex Virus in Bovine Smooth Muscle Cells                                                                                                  | <i>M. S. Lashgari, H. M. Friedman, and N. A. Kefalides</i>                                                                                                           | 145 |
| Serotonin-Induced Actin Polymerization and Association with Cytoskeletal Elements in Cultured Bovine Aortic Endothelium                                                                        | <i>J. S. Alexander, H. B. Hechtman, and David Shepro</i>                                                                                                             | 152 |
| Plasma Immunoreactive Atrial Natriuretic Factor (IR-ANF) Increases Markedly after $\alpha_2$ -Adrenergic Stimulation with Clonidine in Normally Hydrated Rats                                  | <i>Boguslawa Baranowska, Jolanta Gutkowska, Marc Cantin, and Jacques Genest</i>                                                                                      | 159 |
| Identification of the Phosphate Translocator from Maize Mesophyll Chloroplasts                                                                                                                 | <i>Andrew G. Thompson, Michael A. Brailsford, and R. Brian Beechey</i>                                                                                               | 164 |
| Photoregulation Process of Sorghum Leaf Phosphoenolpyruvate Carboxylase: Study with Monoclonal Antibodies                                                                                      | <i>Martine Thomas, Claude Crétin, Eliane Keryer, Jean Vidal, Pierre Gadal, Jean-Michel Bidart, and Claude Bohuon</i>                                                 | 170 |
| Sulfated Oligosaccharides in Human Lysosomal Enzymes                                                                                                                                           | <i>Thomas Braulke, Annette Hille, Wieland B. Huttner, Andrej Hasilik, and Kurt von Figura</i>                                                                        | 178 |
| Human Prepro Atrial Natriuretic Factors 26-55, 56-92, and 104-123 Increase Renal Guanylate Cyclase Activity                                                                                    | <i>David L. Vesely, John M. Bayliss, and Alan L. Sallman</i>                                                                                                         | 186 |
| Do <i>myc</i> , <i>fos</i> , and E1A Function as Protein Phosphatase Inhibitors?                                                                                                               | <i>Martin Rechsteiner</i>                                                                                                                                            | 194 |
| Heterogeneity of Insulinlike Growth Factor-I Affinity for the Insulinlike Growth Factor-II Receptor: Comparison of Natural, Synthetic, and Recombinant DNA-Derived Insulinlike Growth Factor-I | <i>R. G. Rosenfeld, C. A. Conover, D. Hodges, P. D. K. Lee, P. Misra, R. L. Hintz, and C. H. Li</i>                                                                  | 199 |
| Binding of Zinc(II) to $\beta$ -D-Fructose 2,6-Bisphosphate                                                                                                                                    | <i>María Jesús Costas and José Carlos Cameselle</i>                                                                                                                  | 206 |
| Anomeric Specificity of Glucose Effect on cAMP, Fructose 1, 6-Bisphosphatase, and Trehalase in Yeast                                                                                           | <i>Yukiyasu Toyoda, Hirohisa Fujii, Ichitomo Miwa, Jun Okuda, and Jose Sy</i>                                                                                        | 212 |
| The Amino-Terminal Sequence of the 85-90K Nonhormone Binding Component of the Molybdate-Stabilized Estradiol Receptor from Calf Uterus                                                         | <i>Thomas Ratajczak, Mark Comber, Robert Moir, Roland Hähnel, B. Grego, M. R. Rubira, and R. J. Simpson</i>                                                          | 218 |
| Identification of 2-Benzimidazolyl Urea as a New Antimitotic Compound Based on Cross Resistance Studies with Nocodazole-Resistant Mutants of CHO Cells                                         | <i>Radhey S. Gupta</i>                                                                                                                                               | 225 |
| Impaired Cholesterol Esterification in Primary Brain Cultures of the Lysosomal Cholesterol Storage Disorder (LCSD) Mouse Mutant                                                                | <i>Shutish C. Patel, Sundar Suresh, Hana Weintroub, Roscoe O. Brady, and Peter G. Pentchev</i>                                                                       | 233 |
| Triiodothyronine Decreases the Production of Androgen Binding Protein by Rat Sertoli Cells                                                                                                     | <i>E. Fugassa, S. Palmero, and G. Gallo</i>                                                                                                                          | 241 |
| A Strong Homology Exists between the Active T-Cell Binding gp120 Octapeptide of Human Immunodeficiency Virus and the Subtilisin Cleavage Peptide of Bovine Ribonuclease A                      | <i>Matthew R. Pincus, Robert P. Carty, James Chen, and Randall B. Murphy</i>                                                                                         | 248 |
